

GLOBALIZATION AND HEALTH (INS 570-BY)

Wednesdays 9:30 am – 12 pm. Antonio Ferré Building Room 117

Professor Sherri L. Porcelain

Department of International Studies

Office located in the Antonio Ferré Building Room 321

Office hours are Tuesdays 11am-12pm and 2pm – 3pm. I am available Wednesday after class and always by appointment. Please do not hesitate to call /e-mail to arrange a convenient time to meet.

Office telephone is 305.284.3128

E-mail sporcela@med.miami.edu

COURSE OVERVIEW:

This course will seek to identify the linkages of globalization and human health through the examination of the positive and negative impacts globalization has on the public health, safety and security of the world's population. We will analyze different theoretical and empirical research methods used across a range of global public health and health-related issues and policies today. The analyses of globalization perspectives will purposefully cross disciplines and expand upon the broader context of global public health governance, and the interconnectedness of human health and well-being to world affairs.

COURSE OBJECTIVES:

By the end of the semester students will be expected to:

- 1- Identify key global public health issues within the context of world affairs
- 2- Discuss globalization and its positive and negative impacts on public health and safety of populations.
- 3- Examine new conceptual frameworks that contribute to the understanding of public health safety and security in the era of globalization.
- 4- Critically evaluate theoretical and empirical research on globalization and public health

REQUIRED TEXTS:

Lee, Kelley. Globalization and Health an Introduction. Houndmill, Eng.: Palgrave Macmillan, November 2003.

Eds. Kawachi, Ichiro and Sarah Wamala. Globalization and Health. Oxford University Press 2007.

Basch, Paul. The Textbook on International Health 2 Edition. New York: Oxford University Press, 1999.

SUGGESTED TEXT

Garrett, Laurie. Betrayal of Trust: The Collapse of Global Public Health New York: Hyperion Press, 2000.

ADDITIONAL READING REQUIREMENTS:

Each week students are encouraged to review at least one outside source such as the New York Times, Economist, Financial Times, Washington Post or other reliable information sources. The purpose is to identify current events that directly or indirectly impact globalization and public health. During the first 5 minutes of each class session we will discuss new and or continuing global health issues and policies relevant to our course objectives. You can use the Academic Resources tab on the Blackboard system to access the New York Times. On-Line Journal entitled *Globalization and Health*

<http://www.globalizationandhealth.com/info/about/pdf-leaflet/10073.pdf>. This is an open access and peer-reviewed on line journal that deals with the positive and negative effects associated with globalization and health. www.globalizationandhealth.com.

****Introduction to on-line journal- Globalization and Health*. Yach, Derek. (Editorial) "Exploring the opportunities and constraints for health arising from globalization." *Globalization and Health* (2005) 1:2 doi:10.1186/1744-8603-1-2 <http://www.globalizationandhealth.com/content/1/1/2> or PDF.

Martin, Gregg. (Editorial) "*Globalization and Health*" *Globalization and Health* (2005) 1:1 doi:10.1186/1744-8603-1-1 <http://www.globalizationandhealth.com/content/1/1/1> or <http://www.globalizationandhealth.com/content/pdf/1744-8603-1-1.pdf>

I have posted articles from this online journal for your review. I may request you review this site for new articles, debates and emerging methodologies throughout the semester. Keep in mind that this site may also be a useful resource for your research papers.

ADDITIONAL EDUCATIONAL ACTIVITIES:

Students will be expected to participate in class discussions through the university blackboard system. <http://www.courses.miami.edu/webapps/portal/frameset.jsp>. Please make sure you are familiar with using the discussion forum. If you have any difficulty please let me know as soon as possible. The discussion board will serve the following purposes: (1) to assist students that may not feel as comfortable participating in classroom discussions (earlier in the semester) and would like to express themselves more thoroughly through this form of communication; (2) to promote greater dialogue outside the classroom setting; (3) to build collegiality and (4) to continue discussions that may be truncated due to the lack of classroom time. The blackboard discussion forum is **NOT** a substitute for attending or participating in class. The discussion forums will serve as a supplemental tool to our in-class discussions and offer students an opportunity to improve their course participation grade.

GRADING OVERVIEW:

Students are expected to attend class and be prepared to discuss required reading assignments scheduled for that date. Please refer to course syllabus for weekly reading assignments. Class participation is 20% of the final grade. During the semester each student will (i) submit a research/reflection paper on topic of your choice that examines the pros and cons of globalization and the direct and indirect impact on human health and welfare; (ii) fifteen (15) minutes presentation on your globalization and health topic; (iii) midterm out of class assignment and, (iv) final exam. The final exam will be an essay format and will cover course required readings, lectures and discussions.

Attendance/Participation	20%
Midterm Exercise	20%
Position paper	25%
Presentation	10%
Final	25%

I. Attendance/Participation: (20%)

Students are expected to arrive to class with all required readings completed. Students are allowed to miss two (2) classes without any penalty. Since we only meet one time per week, for 2 ½ hours, missed session may reduce your ability to grasp key concepts and fully examine the course literature through class discussions. Students missing more than two classes will be required to submit a written response to the required reading assignments for each class missed after the second absence. These reaction papers must be turned in by the next scheduled seminar unless special considerations have been pre arranged with the instructor. A summary of the reading will not be acceptable. Please submit a 2-3 page response to the readings and your reaction on how this literature does or does not contribute to the wider understanding of globalization and public health in the 21st Century.

II. Position Paper (25%)

This paper will be approximately 15 page double spaced typed pages. The expected range is between 15-18 pages. Specific writing requirements are listed below and a rubric will be disseminated, discussed and posted

on the blackboard early in the semester. This paper is not a “traditional” research paper. It’s a position paper focusing on a specific issue/policy that impacts globalization and health. Students will identify, describe and examine the pros and cons of their topics and how it relates to globalization and population health, safety, and security. While this assignment will require an identification of both the negative and positive aspects of globalization and the impact on population well being; you are asked to take a position on the issue/policy and be prepared to respond to counterarguments in the final written work. Students are expected to support their work with sound empirical and/or theoretical arguments. ***Late papers will be assessed a 5 point penalty for each day until the assignment is submitted.*** If you are unable to attend class on the day the paper is due please submit your paper electronically to my e-mail address found on the course syllabus.

To ensure a timely completion of the assignment students are requested to submit a working outline and bibliography on October 1st.

Guidelines for Position Papers

- (I) Identify and describe your topic and how it relates to globalization and public health
- (II) Discuss the pros and cons on the topic as it impacts public health and human welfare. (Take a position on one side of the argument).
- (III) Analyze your topic and explore the benefits and detriments to population health and welfare. Use specific studies to support the position you have taken. You can use empirical and/or theoretical research to support your argument.
- (IV) Reflect on the future of your topic within a conceptual framework that considers globalization and health.

Please use either MLA or APA format. Do not forget to cite all references in your paper! Prior to submitting your work, please check your grammar and spelling. I will take points off for papers that fail to follow these requirements. A grading sheet will be furnished and posted on the blackboards so students will know the method and scale used to assess each assignment.

III. Oral Presentation (10%)

You are expected to use the same topic for the presentation and paper. Since the presentation will occur prior to your completion of the written work it is suggested that you identify a topic, select a narrow case study and examine the pro and con arguments in your presentation. Each student will present their issue/policy to the class. You should be prepared to counter arguments in the final written work so use this time to float your position on the issue. You will have an opportunity to gather oral and written feedback by your classmates and instructor. Feedback forms will be discussed early in the semester and posted on our course website.

Guidelines Oral Presentation:

Please limit your presentation to no more than 15 minutes with a five minute class feedback session. Use the suggested schedule for planning purposes. You may need to adjust time to fit your specific needs.

(Note: if you would like additional time please pre-arrange this with me so I can plan class time accordingly).

Suggested Oral Presentation Format:

Introduction (3-5 minutes)

Identify and describe your topic (issue/policy as it relates to globalization and health), briefly discuss the historical/ background information of the issue or policy.

Discussion (5 -7 minutes)

Discuss topic in greater detail and consider the following: Identify a case study (level of analysis could be regional, national or local levels). Discuss the pro and con arguments that surround your topic. Propose theoretical and/or empirical evidence to support your presentation.

Solutions/Recommendations (3-5 minutes)

Describe solutions or recommendations. If you have not reached any at this time, state your concerns or conflicts. Please include your personal remarks. (This is an issue presentation and it requires your insights and thoughts on the issue/policy today)

Classmate Questions (5 minutes)

At the conclusion of your presentation you will gather feedback from your classmates and hopefully this will be a valuable tool that will contribute to the writing process. Be prepared to field questions from classmates

IV. Midterm Assignment (20%)

A case study will be presented and students will have the opportunity to apply concepts, models, and frameworks, learned in the first part of the semester to analyze globalization and health in the 21st Century. This will be a take home exercise distributed in class on October 15 and due on October 29. Specific details, requirements and grading rubric will be provided.

IV. Final Exam (25%)

The final exam will be an essay format and will cover course required readings, lectures and discussions. Students will be able to select their essay choices from a list of questions. This will be a take home assignment and will be distributed the last day of class.

Important Dates To Remember this Semester

September 17	Issue Topics Title Due in Writing (preliminary topic title only)
September 24- November 19	Oral Presentation Begin (Please consider volunteering to go first) Oral Presentations Finish
October 1	Submit Outline and Working Bibliography for Paper
October 15	Midterm Distributed
October 29	Midterm Due (at start of class)
November 19	Papers Due (at start of class)
November 26	No Class! Happy Thanksgiving
December 3	Distribute Final Exam
December 10	Final Exam Due by 3pm

Topics/Reading Requirements by Scheduled Date:

August 27

Course introduction and overview- the changing role of public health in world affairs in an era of globalization.

I am sorry that I am not able to be here in person...however, I have prepared a Power Point presentation that you can access on Blackboard (INS570 Globalization and Health) located in the course document folder. This presentation will include introduction to course, course requirements, expectations, and brief overview of globalization and health. A complete syllabus is located in the syllabus folder. I will be in my office after September 2, 2008 if you would like to meet with me. Alternatively, please do not hesitate to e-mail me! I do my best to respond within a few hours, but always within 24 hours.

Please read required readings scheduled for September 3. Supplemental readings are NOT required. They are posted for the purpose of providing students that may want more information on the specific topic of discussion. I look forward to a great semester!

September 3

Introduction to globalization and health: What we need to know about the history of global health. What are the benefits of detriments of globalization on public health?

Required Reading:
