We still need to establish a college level rule regarding double counting of courses towards multiple majors and minors, rather than continue with the ad hoc ruling of "maximally two courses may double count between two majors, and no courses may double count between a major and a minor, or between minors". The following is a proposal from Massimiliano Galeazzi and myself ...

Courses may be used to satisfy the requirements of multiple majors and minors. However, the College requires a minimum total number of credits be obtained for multiple majors and minors. The minimum total number of credits is obtained by summing 30 credits for the first major, 12 credits for the first minor, 24 credits for each additional major, and 9 credits for each additional minor.

For example, a student majoring in Physics, with a minor in Mathematics, and a second minor in Philosophy, would have to complete at least 30+12+9 = 51 credits for the major and double minor. Some courses could double count towards both the Physics major and the Mathematics minor.

As another example, a student majoring in History, with a second major in English, and a minor in Classics, would have to complete at least 30+24+12 = 66 credits for the double major and minor. Some courses could count towards all three.
